Subj: Solar System Packages for Greenfield

Electrical Engineer #49024 Arizona

Dear Resident,

We are offering a 2300 watt package of 10 Canadian Solar PV Electric System mounted side by side on the South, East or West slope of your Park Model roof.

- Cost: \$5,790 pre tax credit (up to 40% available)
Value: 3500 kwh / year

This is a complete packaged system, installed and warrantied for 25 years that will produce electricity from the Sun to offset your power usage from SRP.

While you are gone during the summer, SRP will save all of your systems production, which you then use back for free in the fall months. That is called Net Metering.

My name is Robert Orsello and I am the principal engineer of my company Triage Corp, founded in 1986. I am an experienced professional engineer of 26 years, and have designed an aesthetic Solar System Package specifically for the park models within Greenfield Village, using only North American Products from Canadian Solar, PV Powered and Square D.

It is your right to install solar energy systems on your park model, which no HOA or CC&R can revoke.

Solar Energy is coming to every community, and my philosophy is to let change happen through you, not to you.

I care what happens and how progress unfolds at Greenfield Village. I have a Mother In-law who lives within your community whom my wife and I visit often. At the behest of my wife, I designed this package and associated offer with the ambition of keeping Solar System Installations within your community Clean, Concise, Uniform, Effective and Low Profile.

Please visit my website www.triage.com for more details about me, my company, this offer and what I do.

Call me to learn how you can put my solar package on your Park Model.

480-767-7884

Sunny Regards,
